

Eagleview Estates Storm Door Guide

High River, AB

To maintain a consistent and uniform exterior appearance throughout the complex, any storm door installed on a unit must follow the approved design standard. Storm doors must be white in colour and simple in design, without decorative elements, patterns, or contrasting finishes. The intent of this guideline is to ensure storm doors complement the primary entry doors and do not create visual inconsistencies across the community.

All storm door installations must comply with the approved guideline image provided below. Any storm door that does not meet these requirements may be denied approval and/or required to be removed and replaced with a storm door that complies with the approved standard.

Storm doors must have a soft close mechanism to prevent the door from slamming closed.

The following storm door features are not permitted:

- Storm doors in colours other than white (e.g., black, bronze, brown, cream, etc.)
- Decorative or ornate designs, including scrollwork or patterned bars
- Decorative glass, etched glass, or heavily tinted glass
- Contrasting frames or trim
- Any style that significantly differs from the approved guideline image
